About Us

Topwolves is a unique collection of 5555 detailed, hand drawn 3D wolves inspired by highly successful personas across the world; featuring artwork with detail and precision unmatched by any project. We are launching a detailed 3D collection backed by a unique gamified utility. Our genesis collection of 3D wolves in designer suits are backed by a low mint price and supply to maximize value for holders. Each holder will also have access to an immersive betting ecosystem never explored before in the NFT space.

Our team of talented smart contract developers, marketing experts, 3D artists and founders are here to create a comprehensive experience for the holders. We will be launching on the Ethereum blockchain and our betting experience will allow users to earn Ethereum (\$ETH) as well as \$PACK tokens through staking mechanism. \$PACK tokens earned will provide access to our marketplace.

Mint Details

Topwolves will be launching in Q2 2022 on the Ethereum blockchain and will be listed on Opensea marketplace following our mint. Our reveal will be 48-72 hours after our launch and integration with rarity sites will be seamless. We will initially be launching a 1111 genesis collection with added utilities and benefits to holders and will be launching the official collection of 4444 NFTs subsequently. Our presale price is 0.1 ETH and our public price is TBA- for more details and updates, refer to the Join The Pack section of this Whitepaper.

Roadmap

1) Leading up to the Launch

Our marketing team is working on multiple campaigns to create awareness about this project and to prepare for a grand launch. We are teaming up with dedicated influencers on multiple social media platforms who truly believe in the future of our project. We will also be collaborating with established NFT projects in order to grow our community.

2) Launching our Genesis collection - Q2 2022

We will be launching a genesis collection of 1111 fine hand drawn 3D NFT collection in Q2 2022. Following the launch of our NFTs, you can view them on Opensea marketplace, our NFTS will be revealed 48-72 hours after our mint, integration with rarity sites will be seamless and instant after reveal.

3) Further launch of official collection

Subsequent to the successful launch of the genesis collection, we will be launching our official collection of a further 4444 of our finest wolves including two legendary wolves. All our collections are randomly generated and uploaded to the contract and they will be minted in the order of users buying them. We have no control over allocation of the NFTs.

4) DAO formation

Following the successful launch of our collections, the team will set up a DAO where holders of our NFTS will be able to vote on the future of our project and the allocation of our funds.

5) Royalties

We will be charging up to 10% royalties on our NFT project, but all funds collected from royalties will be reinvested into the future of our project and ensuring we provide maximum value to our investors. Presently, the allocation planned is as follows.

- ➤ 40% of all royalties will be allocated to further developing our game
- ➤ 40% of all royalties will go towards the DAO's fund where holders will be able to vote on how this money is spent
- 10% will be redistributed to all holders who purchase (and hold) 5 or more TopWolves NFTs
- 10% The remaining funds collected from royalties will be used on our marketing budget

6) NFT staking – Q3 2022

After our successful launch you will be able to stake your NFT and it will yield \$PACK token daily, this token's utilities are outlined later in this whitepaper.

7) Betting Game Released - Q3 2022

We will be releasing our play to earn (P2E) game which offers a unique experience where holders are able to bet on the floor price of reputable NFT projects - so that floor price can't be manipulated.

Holders who bet accurately will be rewarded in \$ETH with a bonus of \$PACK tokens, whereas holders who predict incorrectly will have to pay \$PACK tokens in order to play again or pay a small fee in \$ETH. Please refer to the <u>Gameplay</u> section of our whitepaper.

8) Marketplace Launch

We will be launching our official NFT marketplace which will feature NFTS that can be purchased via \$PACK token- including whitelists to upcoming projects, NFTS from partnering projects and whitelists for our future mints.

Please note that while we are committed to our vision, the roadmap outlined could be subject to change depending on factors beyond our control.

TOPWOLVES DAO

After our successful launch we will set up the Topwolves DAO, which is a decentralised autonomous organisation, backed by a smart contract, which will enable holders of our NFT project to vote on the allocation of funds collected. This will ensure complete transparency of our project and will provide value to all of our holders; ensuring that the future of our project is as envisioned by our holders. This will also let the holders of our project make decisions regarding the future of the project.

\$PACK token

Earning \$PACK

Holders will be able to earn \$PACK token by staking our NFT following the launch of our token there will be weekly airdrops of \$PACK token to all Topwolves holders. You will also earn \$PACK tokens through our unique P2E game which will enable holders to be rewarded in \$ETH and \$PACK tokens for making a successful bet. The various utilities of holding and staking \$PACK token are outlined on the next page.

Please note we will release tokenomics soon after our launch and exact figures of how much \$PACK token holders will earn.

Token Utility

There will be numerous utilities for our native token \$PACK. Following the development of our NFT

marketplace, we will be selling whitelists to other top NFT projects, whitelists to Topwolves' future projects and NFTs from partnering projects which can all be purchased exclusively from our NFT

marketplace and can only be purchased using \$PACK tokens. Staking \$PACK tokens will also yield passive income as any transaction fees from our marketplace will be distributed amongst everyone who stakes \$PACK token. \$PACK token will also be used in our betting ecosystem.

\$PACK marketplace

Our marketplace will be hosted on our website and all transactions will take place on our native governance token \$PACK. Whitelists for all future drops and partnering projects can be purchased on our marketplace through \$PACK token. Therefore, by staking and holding your NFT(s) you will receive \$PACK tokens and you will be able to purchase an automatic whitelist pass for all of our future drops. On our marketplace plan to sell NFTs from partnering projects, with a much lower fee than open sea. Therefore, our holders will be rewarded with the ability to purchase NFTs for cheaper and have access to a whitelist on future projects.

Revolutionising NFT Utility

Gameplay

Our unique wall-street themed game will allow holders of our NFTS to have access to the ability to short or long the floor price of established blue chip NFT projects. This enables holders to profit if they accurately predict the change in floor price of blue chip NFT projects. In order to avoid floor price manipulation to affect the ethics of our game we will initially only allow blue chip projects with a high floor price to be available in our game. The only way to have access to the game is by holding a Topwolves NFT. This can be great if you are the holder of one of these NFTs integrated with our game and you can make money if the floor price goes up and even if the floor price goes down you can be rewarded through our game.

P2E mechanics

How can I earn money from playing this game?

By betting accurately on the trends of blue chip NFT's floor prices, all participants of the game will be rewarded in \$ETH - so you can earn more Ethereum just by playing our game. All successful predictions will also be rewarded by a \$PACK token airdrop which will take place at the end of every week after the launch of our game. Holders will be able to bet on the floor price of an NFT project decreasing (shorting) or the floor price increasing.

What if I bet wrong?

Players of our game who place an inaccurate bet will have to pay a fee in \$PACK token before they can play again. Alternatively, they can pay a small fee (tbc) in Ethereum before they can start playing again.

Please note if you have a fee pending you will not be able to list or sell your NFT. You can still stake your NFT and yield \$PACK token until you can pay the small fee needed to re participate.

Details of the game, odds and the betting spread will be announced closer to the game launch. Follow our social media handles for further updates.
